

IC200MDL650
Input Module, 24VDC Pos/Neg Logic 32 Points

Discrete input module IC200MDL650 provides four groups of 8 discrete inputs. Inputs in each group can be either positive logic inputs that receive current from input devices and return the current on the common, or negative-logic inputs that receive current from the common and return current to the input device. Input devices are connected between the input terminals and common terminals.

Note: Negative-logic functionality requires module version IC200MDL650C or higher.

Power for module operation comes from the backplane.

Intelligent processing for this module is performed by the CPU or NIU. The module provides 32 bits of discrete input data.

LED Indicators

Individual green LEDs indicate the on/off state of each input point.

The green OK LED is on when backplane power is present to the module.

Configuration Parameters

The module's basic input on/off response time is 0.5ms.

For some applications, it may be preferable to add additional filtering to compensate for conditions such as noise spikes or switch bounce. Input filter times of 0ms, 1.0ms, or 7.0ms are selectable via CPU software configuration, for total response times of 0.5ms, 1.5ms, and 7.5ms respectively. The default is 1.0ms filter time (total response time is 1.5ms).

Module Specifications

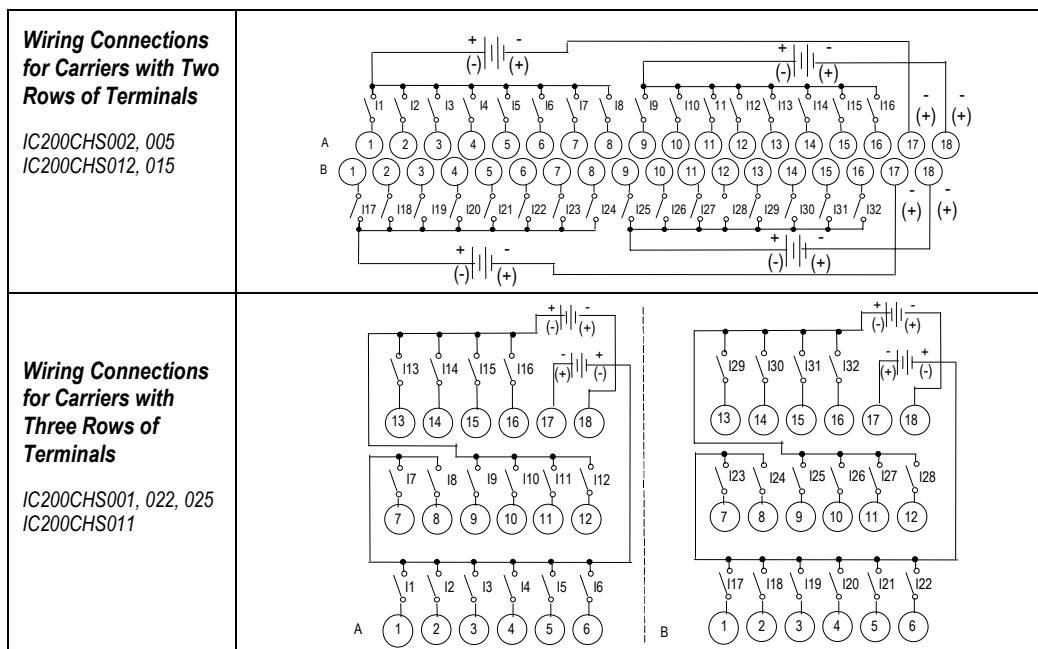

Module Characteristics	
Points	32 (4 groups of 8)
Module ID	80088008
Isolation:	
User input to logic (optical) and to frame ground	250VAC continuous; 1500VAC for 1 minute
Group to group	250VAC continuous; 1500VAC for 1 minute
Point to point	None
LED indicators	One LED per point shows individual point ON/OFF status OK LED indicates backplane power is present
Backplane current consumption	5V output: 50mA maximum
External power supply	None
Thermal derating	See diagram
Configuration parameters	Input response times
Input Characteristics	
Input voltage	0 to +30VDC,+24VDC nominal
On state voltage	+15 to +30VDC
Off state voltage	0 to +5VDC
On state current	2.0 to 5.5mA
Off state current	0 to 0.5mA
On response time	0.5ms maximum
Off response time	
Configurable filter time	0 ms, 1.0ms (default), or 7.0ms
Input impedance	10kOhms maximum

Thermal Derating

The number of points that can be on at the same time depends on the ambient temperature, the external voltage, and the orientation of the module and DIN rail.

There is no derating at 24VDC. Deratings at 30VDC are shown below.
